IN THE CLAIMS

1. (previously presented) A first surface optical storage disc, comprising:

a circular substrate having a first principal surface and an opposing second principal surface;

bumps formed on a first portion of the first principal surface, wherein the bumps represent pre-recorded information;

lands formed on a second portion of the first principal surface; and a phase-change material deposited on the first portion and the second portion of the first principal surface; and

a dielectric layer sputtered over the phase-change material; the first surface disk having no additional layers overlaying the dielectric layer, wherein a data density of the first portion is less than a data density of the second portion.
